- Collaborated with a team of developers on a web app project using React Js.
- Developed and tested new features, improving app functionality and user experience.

Skills Developed: React.js, Bootstrap, HTML

Projects

Type-Mastery

- The main goal for building a typing speed website project is to help users improve their typing skills and speed. Key features should include typing tests, accuracy measurement, real-time feedback, user profiles, customizable settings to create a comprehensive and engaging typing speed test platform.
- To build the typing speed website, we plan the project, design the user interface, develop the site with key features, test thoroughly, gather user feedback, deploy the site, and ensure ongoing updates and maintenance for optimal performance and user satisfaction.
- Implemented a multimode typing test website with the ability to save results for better analysis, Used firebase to implement login/signup auth and also used a database to save results, Used various react hooks and context API to implement major functionalities like themes and test modes, Tool and Technologies - React, Material UI, Firebase, Styled Components, Toastify

Skills Developed: Firebase, React.js, Javascript, HTML, CSS, Material-UI

Skills
